Maximize revenue per m² with zero operational effort

What does a TheArtiCase machine deliver for your location? More revenue, more engagement, more visitors — all without any investment, staff or operational effort on your part.

1

First in the Netherlands

TheArtiCase is the first and only provider of this concept in the Netherlands. No direct competition — your location offers visitors something they can't find anywhere else. That attracts attention, creates buzz and sets you apart.

2

Direct revenue from available m²

Generate extra income through revenue sharing or a fixed monthly fee. The machine pays for itself from day one — you invest nothing, but profit directly from every printed case.

3

Zero investment, zero staff

TheArtiCase delivers, installs and fully manages the machine. The system is 100% self-service via a large touchscreen. Your location doesn't need to allocate staff or budget.

4

More visitors, longer dwell time

The machine is an interactive attraction that draws visitors in and keeps them longer. Customers design their own case, take selfies and share the result on social media — free exposure for your location.

5

Fully managed from A to Z

TheArtiCase handles everything: transport, installation, restocking of cases and ink, technical maintenance, software updates and fault service. You literally don't have to arrange anything.

6

Your branding, your look

The full machine wrapping and on-screen interface are tailored to match the branding, campaigns or seasonal promotions of your location. The machine feels like part of your venue.

Pricing & terms fully customized

7

No fixed price list, no standard contract. Every location is different — that's why TheArtiCase creates a tailored proposal for each partner. Think: revenue sharing or a fixed monthly fee, short or long term, seasonal placement, and full branding in your house style. Everything is negotiable and determined together.

Available models

Two machine types with the same print technology. The choice depends on available space and expected volume.

SUITED FOR HIGH VOLUMES
